Treasury Curve Stress

INTERNAL

Treasury yield curve stress study measuring inversion and steepening regimes and forward SPY returns.

Data Sources

- **treasury_yields**: Treasury yield curve data (1M, 2Y, 3M, 10Y)
- **market_ohlcv**: SPY daily closes

Executive Summary

> **NOTE**
> Treasury yield curve stress study. Measures inversion and steepening regimes and forward SPY returns.

Results & Interpretation

> **NOTE**
> Treasury yield curve stress study measuring inversion and steepening regimes and forward SPY returns.

Objectives

> **NOTE**
> Evaluate whether the studied signal produces a measurable, repeatable edge.

Quantify the reliability of the observed patterns across the sample.

Methodology

> **NOTE**
> Yield curve metrics: 10Y-2Y spread (y2y10) and 10Y-3M spread (y3m10y). Stress: inversion (y2y10<0) or 10Y-3M<0. Steepening: 5-day curve change>0. Repair: not stressed and steepening. Forward SPY return computed over horizon days.

Treasury Curve Stress

Limitations

NOTE
Results are research-grade, not investment advice. The sample is limited to available data, and measured edges may not persist out-of-sample.

Glossary

Term	Definition
n / count	Number of observations or events in the sample.
edge	Average excess return versus the unconditional baseline.
hit-rate	Share of events with a positive forward return.
p-value	Probability of observing the result under the null of no edge.
*** / ** / *	Significance at 99.9% / 99% / 95% confidence.
α (alpha)	Intercept or active return versus benchmark.
β (beta)	Sensitivity to a reference factor or market.
σ (sigma)	Volatility / standard deviation of returns.
