Executive Summary

NOTE

ETF flow momentum divergence study comparing local ETF flow with price momentum.

Results & Interpretation

- Across 475 events, the forward return averaged +1.41%. Returns were positive 70.9% of the time.
- Across 239 events, the forward return averaged +2.39%. Returns were positive 79.1% of the time.
- Across 236 events, the forward return averaged +0.41%. Returns were positive 62.7% of the time.
- Across 54 events, the forward return averaged +3.65%. Returns were positive 88.9% of the time.
- Across 43 events, the forward return averaged +2.13%. Returns were positive 67.4% of the time.

Objectives

NOTE

Evaluate whether the studied signal produces a measurable, repeatable edge.

Quantify the reliability of the observed patterns across the sample.

Methodology

NOTE

Flow divergence computed via the high-value common framework. Stress score identifies periods where ETF flow momentum diverges from price momentum, flagging potential forced demand or supply imbalances.

NOTE

Results are research-grade, not investment advice. The sample is limited to available data, and measured edges may not persist out-of-sample.
