

Corporate Actions Event Study

INTERNAL

Measure price drift around dividend and stock-split corporate events.

Author: Cerberus Research

Data Sources

- `corporate_actions/corporate_actions`

Key Findings

- Dividend events: 25 | avg 63-bar CAR: 0.46%
- Split events: 24 | avg 63-bar CAR: -1.52%

Executive Summary

NOTE

Event study of dividend and stock-split announcements, measuring cumulative abnormal returns around effective dates.

Results & Interpretation

- Across 25 events, the car averaged +0.46%. Returns were positive 48.0% of the time. The difference has $p \approx 0.896$.
- Across 24 events, the car averaged -1.52%. Returns were positive 58.3% of the time. The difference has $p \approx 0.698$.

Objectives

NOTE

Evaluate whether the studied signal produces a measurable, repeatable edge.

Quantify the reliability of the observed patterns across the sample.

Methodology

NOTE

Analysis is run on the configured datasets with the parameters listed in the Study Configuration block. Results are aggregated into summary statistics, tables, and visual one-pagers for review.

Statistical Results

event_type	count	avg_car_pct	median_car_...	hit_rate_...	t_stat	p_value
dividend	25	+ 0.46%	-1.72%	+ 48.00%	0.13	- 0.896
split	24	-1.52%	+ 1.12%	+ 58.33%	-0.39	- 0.698

Table 1. Corporate action event statistics

Limitations

NOTE

Results are research-grade, not investment advice. The sample is limited to available data, and measured edges may not persist out-of-sample.

Appendix Tables

event_stats

event_type	count	avg_car_pct	median_car_...	hit_rate_...	t_stat	p_value
dividend	25	+ 0.46%	-1.72%	+ 48.00%	0.13	- 0.896
split	24	-1.52%	+ 1.12%	+ 58.33%	-0.39	- 0.698

Glossary

Term	Definition
n / count	Number of observations or events in the sample.
edge	Average excess return versus the unconditional baseline.
hit-rate	Share of events with a positive forward return.
p-value	Probability of observing the result under the null of no edge.
*** / ** / *	Significance at 99.9% / 99% / 95% confidence.
α (alpha)	Intercept or active return versus benchmark.
β (beta)	Sensitivity to a reference factor or market.
σ (sigma)	Volatility / standard deviation of returns.
