

Dataroma Manager Rotation Signal

INTERNAL

Track sector-level smart-money rotation from Dataroma manager holdings and sector flows.

Author: Cerberus Research

Generated: 2026-08-05 07:36 UTC

Data Sources

- dataroma/dataroma_sector_flows
- dataroma/dataroma_holdings_changes

Key Findings

- No sector rotation signal computed

Executive Summary

NOTE

Tracks Dataroma manager sector-flow rotation and maps inflow/outflow sectors to sector ETFs for a forward-return backtest.

Results & Interpretation

NOTE

Track sector-level smart-money rotation from Dataroma manager holdings and sector flows.

The study analysed 5 rows of data.

Main takeaways:

- No sector rotation signal computed

Objectives

NOTE

Evaluate whether the studied signal produces a measurable, repeatable edge.

Quantify the reliability of the observed patterns across the sample.

Methodology

NOTE

Analysis is run on the configured datasets with the parameters listed in the Study Configuration block. Results are aggregated into summary statistics, tables, and visual one-pagers for review.

Limitations

NOTE

Results are research-grade, not investment advice. The sample is limited to available data, and measured edges may not persist out-of-sample.

Glossary

Term	Definition
n / count	Number of observations or events in the sample.
edge	Average excess return versus the unconditional baseline.
hit-rate	Share of events with a positive forward return.
p-value	Probability of observing the result under the null of no edge.
*** / ** / *	Significance at 99.9% / 99% / 95% confidence.
α (alpha)	Intercept or active return versus benchmark.
β (beta)	Sensitivity to a reference factor or market.
σ (sigma)	Volatility / standard deviation of returns.
