

Funding Crowding Reversal Study

INTERNAL

Approximates crowded funding risk from crypto momentum, volatility, and reversal pressure.

Data Sources

- **market_ohlcv**: OHLCV data for BTC-USD, ETH-USD, SOL-USD
- **market_ohlcv**: OHLCV data for BTC-USD, ETH-USD, SOL-USD

Key Findings

- Funding crowding reversal proxy: BTC-USD, ETH-USD, SOL-USD | lookback=63 horizon=14

Executive Summary

NOTE

Approximates crowded funding risk from crypto momentum, volatility, and reversal pressure.

Results & Interpretation

NOTE

Approximates crowded funding risk from crypto momentum, volatility, and reversal pressure.

Main takeaways:

- Funding crowding reversal proxy: BTC-USD, ETH-USD, SOL-USD | lookback=63 horizon=14

Objectives

NOTE

Evaluate whether the studied signal produces a measurable, repeatable edge.

Quantify the reliability of the observed patterns across the sample.

Methodology

NOTE

Realized volatility mode: rolling return and vol statistics across BTC, ETH, SOL proxies.

Limitations

NOTE

Results are research-grade, not investment advice. The sample is limited to available data, and measured edges may not persist out-of-sample.

Glossary

Term	Definition
n / count	Number of observations or events in the sample.
edge	Average excess return versus the unconditional baseline.
hit-rate	Share of events with a positive forward return.
p-value	Probability of observing the result under the null of no edge.
*** / ** / *	Significance at 99.9% / 99% / 95% confidence.
α (alpha)	Intercept or active return versus benchmark.
β (beta)	Sensitivity to a reference factor or market.
σ (sigma)	Volatility / standard deviation of returns.
