

Perp Basis Carry Regime

INTERNAL

Estimates risk appetite and deleveraging from spot and futures-style crypto proxies.

Data Sources

- **market_ohlcv**: OHLCV data for BTC-USD, ETH-USD, BITO, BTF
- **market_ohlcv**: OHLCV data for BTC-USD, ETH-USD, BITO, BTF

Key Findings

- Perp basis carry regime proxy: BTC-USD, ETH-USD, BITO, BTF | lookback=63 horizon=14

Executive Summary

NOTE

Estimates risk appetite and deleveraging from spot and futures-style crypto proxies.

Results & Interpretation

NOTE

Estimates risk appetite and deleveraging from spot and futures-style crypto proxies.

Main takeaways:

- Perp basis carry regime proxy: BTC-USD, ETH-USD, BITO, BTF | lookback=63 horizon=14

Objectives

NOTE

Evaluate whether the studied signal produces a measurable, repeatable edge.

Quantify the reliability of the observed patterns across the sample.

Methodology

NOTE

Cross-asset mode: rolling correlations and carry regime classification using BITO and BTF as perp proxies.

Limitations

NOTE

Results are research-grade, not investment advice. The sample is limited to available data, and measured edges may not persist out-of-sample.

Glossary

Term	Definition
n / count	Number of observations or events in the sample.
edge	Average excess return versus the unconditional baseline.
hit-rate	Share of events with a positive forward return.
p-value	Probability of observing the result under the null of no edge.
*** / ** / *	Significance at 99.9% / 99% / 95% confidence.
α (alpha)	Intercept or active return versus benchmark.
β (beta)	Sensitivity to a reference factor or market.
σ (sigma)	Volatility / standard deviation of returns.
