Data Sources

- **china_nbs/china_nbs_curated**: China NBS macro releases

Executive Summary

NOTE

China macro regime monitor. Aggregates activity, price, and credit indicators from China NBS into a macro pulse and tests SPY forward returns across expansion and slowdown regimes.

Results & Interpretation

NOTE

Activity, credit, and price regime monitor for China using NBS releases.

The study analysed 7 rows of data.

Objectives

NOTE

Evaluate whether the studied signal produces a measurable, repeatable edge.

Quantify the reliability of the observed patterns across the sample.

Methodology

NOTE

NBS series are converted to year-over-year changes and grouped into activity, price, and credit baskets. The pulse is the cross-sectional average, z-scored vs trailing 36-month history. Regimes split at the median.

Limitations

NOTE

Results are research-grade, not investment advice. The sample is limited to available data, and measured edges may not persist out-of-sample.

Glossary

Term	Definition
n / count	Number of observations or events in the sample.
edge	Average excess return versus the unconditional baseline.
hit-rate	Share of events with a positive forward return.
p-value	Probability of observing the result under the null of no edge.
*** / ** / *	Significance at 99.9% / 99% / 95% confidence.
α (alpha)	Intercept or active return versus benchmark.
β (beta)	Sensitivity to a reference factor or market.
σ (sigma)	Volatility / standard deviation of returns.
