

Credit Equity Vol Stress

INTERNAL

Credit, equity, and volatility stress regime study measuring forward SPY returns across stress regimes.

Data Sources

- **macro_liquidity**: Macro liquidity dataset used as fallback credit spread source
- **market_ohlcv**: SPY, HYG, LQD, and VIX OHLCV data via yfinance

Key Findings

- credit_warning: avg_fwd=+0.93% win=76.1%
- confirmed_stress: avg_fwd=+4.03% win=73.9%
- risk_repair: avg_fwd=+0.02% win=58.9%

Executive Summary

NOTE

Credit, equity, and volatility stress regime study. Identifies credit warning, confirmed stress, and risk repair regimes and measures forward SPY returns for each.

Results & Interpretation

- Across 343 events, the forward return for credit_warning averaged +0.93%. Returns were positive 76.1% of the time.
- Across 69 events, the forward return for confirmed_stress averaged +4.03%. Returns were positive 73.9% of the time.
- Across 384 events, the forward return for risk_repair averaged +0.02%. Returns were positive 58.9% of the time.

Objectives

NOTE

Evaluate whether the studied signal produces a measurable, repeatable edge.

Quantify the reliability of the observed patterns across the sample.

Methodology

Z-score normalization of HYG/LQD credit ratio and VIX over a rolling lookback window. Three regimes defined: credit_warning (credit_z<=-1, drawdown>-5%), confirmed_stress (credit_z<=-1, vix_z>=1, drawdown<=-5%), risk_repair (credit_z>=1, vix_z<=0). Forward SPY returns computed over horizon bars.

Statistical Results

event	events	avg_fwd_ret_...	median_fwd_ret_...	win_rate_...	avg_drawdown_pct
credit_warning	343	+ 0.93%	+ 2.12%	+ 76.09%	-1.28%
confirmed_stress	69	+ 4.03%	+ 5.45%	+ 73.91%	-15.60%
risk_repair	384	+ 0.02%	+ 0.64%	+ 58.85%	-3.17%

Table 1. Stress Regime Summary

Limitations

NOTE

Results are research-grade, not investment advice. The sample is limited to available data, and measured edges may not persist out-of-sample.

Table 1

Glossary

Term	Definition
n / count	Number of observations or events in the sample.
edge	Average excess return versus the unconditional baseline.
hit-rate	Share of events with a positive forward return.
p-value	Probability of observing the result under the null of no edge.
*** / ** / *	Significance at 99.9% / 99% / 95% confidence.
α (alpha)	Intercept or active return versus benchmark.
β (beta)	Sensitivity to a reference factor or market.
σ (sigma)	Volatility / standard deviation of returns.
