Executive Summary

NOTE

Global central bank liquidity tracker. Aggregates year-over-year changes in central-bank balance sheets and liquidity facilities, then tests SPY forward returns across easing and tightening regimes.

Results & Interpretation

- Across 542 events, the forward return averaged +0.86%. Returns were positive 67.7% of the time.
- Across 637 events, the forward return averaged +1.87%. Returns were positive 74.7% of the time.

Objectives

NOTE

Evaluate whether the studied signal produces a measurable, repeatable edge.

Quantify the reliability of the observed patterns across the sample.

Methodology

NOTE

Each central bank's selected series are converted to 12-month percent changes, averaged per bank, then aggregated across banks. The aggregate is z-scored vs trailing 36-month history. Regimes split at the median.
