Data Sources

- **macro_liquidity**: Macro liquidity series partitions

Key Findings

- Net Liquidity (latest): 5825.26
- hy_spread: top-bottom +2.81% 21-bar forward SPY, $p=0.000$ ($r=0.30$)

Executive Summary

NOTE

Dashboard overview of macro liquidity conditions including net liquidity, credit spreads, financial stress index, and NFCI, with SPY forward-return attribution and significance testing.

Results & Interpretation

- Net_liquidity correlates with forward returns at $r=+0.10$ ($p \approx 0.0002$). When it was highest, forward returns averaged +2.51% vs +1.28% when it was lowest.
- Credit_spread correlates with forward returns at $r=+0.17$ ($p \approx 1.3e-08$). When it was highest, forward returns averaged +2.76% vs +0.24% when it was lowest.
- Hy_spread correlates with forward returns at $r=+0.30$ ($p \approx 4.4e-25$). When it was highest, forward returns averaged +2.88% vs +0.08% when it was lowest.
- Yield_curve correlates with forward returns at $r=+0.08$ ($p \approx 0.00255$). When it was highest, forward returns averaged +2.44% vs +1.00% when it was lowest.
- Financial_stress_index correlates with forward returns at $r=+0.24$ ($p \approx 1.4e-20$). When it was highest, forward returns averaged +2.72% vs +0.68% when it was lowest.
- Nfci correlates with forward returns at $r=+0.06$ ($p \approx 0.0284$). When it was highest, forward returns averaged +1.40% vs +0.11% when it was lowest.
- Term_premium_10y correlates with forward returns at $r=+0.07$ ($p \approx 0.00715$). When it was highest, forward returns averaged +1.99% vs +1.39% when it was lowest.

Objectives

NOTE

Evaluate whether the studied signal produces a measurable, repeatable edge.

Quantify the reliability of the observed patterns across the sample.

Methodology

Time-series analysis of macro_liquidity dataset partitions. Latest values compared with prior period to compute deltas. For each metric, the correlation with and the top-quartile-minus-bottom-quartile spread of forward SPY returns (trading-bar horizon from config, default 21) are reported with Pearson and Welch two-sample p-values.

Table 2. Liquidity Metric vs Forward SPY Return Attribution

Limitations

NOTE

Results are research-grade, not investment advice. The sample is limited to available data, and measured edges may not persist out-of-sample.

Table 2

Glossary

Term	Definition
n / count	Number of observations or events in the sample.
edge	Average excess return versus the unconditional baseline.
hit-rate	Share of events with a positive forward return.
p-value	Probability of observing the result under the null of no edge.
*** / ** / *	Significance at 99.9% / 99% / 95% confidence.
α (alpha)	Intercept or active return versus benchmark.
β (beta)	Sensitivity to a reference factor or market.
σ (sigma)	Volatility / standard deviation of returns.
