

Yield Curve Steepening Trades

INTERNAL

Trade regime identification using 2s10s and 10s3m Treasury curve slopes.

Key Findings

- 2s10s slope regime Q5 avg fwd return: -1.02%

Executive Summary

NOTE

Yield curve steepening/flattening regimes based on 2s10s and 10s3m slopes, with forward benchmark return attribution by regime.

Results & Interpretation

- Across 16 events, the forward return averaged +0.50%. Returns were positive 75.0% of the time.
- Across 25 events, the forward return averaged +1.52%. Returns were positive 44.0% of the time.
- Across 28 events, the forward return averaged +6.93%. Returns were positive 100.0% of the time.
- Across 28 events, the forward return averaged -1.01%. Returns were positive 39.3% of the time.
- Across 28 events, the forward return averaged -1.02%. Returns were positive 25.0% of the time.

Objectives

NOTE

Evaluate whether the studied signal produces a measurable, repeatable edge.

Quantify the reliability of the observed patterns across the sample.

Methodology

NOTE

Analysis is run on the configured datasets with the parameters listed in the Study Configuration block. Results are aggregated into summary statistics, tables, and visual one-pagers for review.

Table 2. Forward returns by slope regime

Limitations

NOTE

Results are research-grade, not investment advice. The sample is limited to available data, and measured edges may not persist out-of-sample.

Glossary

Term	Definition
n / count	Number of observations or events in the sample.
edge	Average excess return versus the unconditional baseline.
hit-rate	Share of events with a positive forward return.
p-value	Probability of observing the result under the null of no edge.
*** / ** / *	Significance at 99.9% / 99% / 95% confidence.
α (alpha)	Intercept or active return versus benchmark.
β (beta)	Sensitivity to a reference factor or market.
σ (sigma)	Volatility / standard deviation of returns.
