

Security Master Data Quality Audit

INTERNAL

Audit security master coverage, symbol changes, and OpenFIGI mapping gaps.

Data Sources

- security_master/security_master_latest

Key Findings

- Missing sector: 0 records (0.0%)
- Missing OpenFIGI FIGI: 5 records (0.5%)

Executive Summary

NOTE

Audits security master coverage, active/inactive status, field completeness, duplicate symbols, and OpenFIGI mapping gaps.

Results & Interpretation

NOTE

Audit security master coverage, symbol changes, and OpenFIGI mapping gaps.

The study analysed 919 rows of data.

Main takeaways:

- Missing sector: 0 records (0.0%)
- Missing OpenFIGI FIGI: 5 records (0.5%)

Objectives

NOTE

Evaluate whether the studied signal produces a measurable, repeatable edge.

Quantify the reliability of the observed patterns across the sample.

Methodology

NOTE

Analysis is run on the configured datasets with the parameters listed in the Study Configuration block. Results are aggregated into summary statistics, tables, and visual one-pagers for review.

Statistical Results

metric	count	pct
total_records	919	+ 100
active_records	780	+ 84.87
missing_sector	0	0
missing_industry	0	0
missing_country	0	0
missing_cik	0	0
missing_openfigi_figi	5	+ 0.54
missing_openfigi_composite_figi	5	+ 0.54
duplicate_symbols	0	0

Table 1. Security master quality metrics

Limitations

NOTE

Results are research-grade, not investment advice. The sample is limited to available data, and measured edges may not persist out-of-sample.

Table 1

Glossary

Term	Definition
n / count	Number of observations or events in the sample.
edge	Average excess return versus the unconditional baseline.
hit-rate	Share of events with a positive forward return.
p-value	Probability of observing the result under the null of no edge.
*** / ** / *	Significance at 99.9% / 99% / 95% confidence.
α (alpha)	Intercept or active return versus benchmark.
β (beta)	Sensitivity to a reference factor or market.

Term	Definition
σ (sigma)	Volatility / standard deviation of returns.
