

0DTE Gamma Exposure Pin

INTERNAL

Estimate gamma exposure concentration around 0DTE expiries and pin risk.

Data Sources

- options/options_analytics

Key Findings

- Max near-dated gamma exposure: 0

Executive Summary

NOTE

Aggregates near-dated option gamma exposure as a proxy for 0DTE pin risk.

Results & Interpretation

NOTE

Estimate gamma exposure concentration around 0DTE expiries and pin risk.

The study analysed 38 rows of data.

Main takeaways:

- Max near-dated gamma exposure: 0

Objectives

NOTE

Evaluate whether the studied signal produces a measurable, repeatable edge.

Quantify the reliability of the observed patterns across the sample.

Methodology

NOTE

Analysis is run on the configured datasets with the parameters listed in the Study Configuration block. Results are aggregated into summary statistics, tables, and visual one-pagers for review.

Limitations

NOTE

Results are research-grade, not investment advice. The sample is limited to available data, and measured edges may not persist out-of-sample.

Glossary

Term	Definition
n / count	Number of observations or events in the sample.
edge	Average excess return versus the unconditional baseline.
hit-rate	Share of events with a positive forward return.
p-value	Probability of observing the result under the null of no edge.
*** / ** / *	Significance at 99.9% / 99% / 95% confidence.
α (alpha)	Intercept or active return versus benchmark.
β (beta)	Sensitivity to a reference factor or market.
σ (sigma)	Volatility / standard deviation of returns.
